

# TapToCure

**Brief Description:** TapToCure is an online appointment booking platform where Doctors and patients can register themselves and patients can book appointments for the check-ups.

**Problem Statement:** As we know, a healthy mind resides in a healthy body. Periodic or Routine medical check-up is seen as effective in preventing illness and promoting health as well as reducing morbidity and mortality. But in our hectic lifestyle, we hardly get time to fix our health check-ups as the process is tedious.

**So, there is a need for an online platform where Doctors and patients can register themselves and patients can book appointments for the check-ups.**

**Core Problem:** People often face several problems when it comes to find a perfect doctor for their medical requirement, also the traditional way of visiting a clinic is very time consuming and hectic.

## Project Milestones:

1. Complete web application having frontend, backend and database integration.
2. Creating microservices
3. CI and CD implementation with Dockerization
4. Security implementation
5. Code with Unit test cases.
